Reviewer's report

**Title:** Surgical physiology of inguinal hernia repair (A STUDY OF 200 CASES)

**Authors:**

Dr Mohan P Desarda Dr. (desarda@vsnl.net)

**Version:** 4 **Date:** 30 Jan 2003

**Reviewer:** Volker Schumpelick

**Level of interest:** A paper whose findings are important to those with closely related research interests

**Advice on publication:** Other (see below)

After revision of the above manuscript most of my first review comments were answered. The methods are better explained and the results are easier to reproduce. There is still a leak of scientific objective data, but this fact should not exclude the paper for publication. The corrections are satisfactory and the manuscript adhere to the relevant standard of reporting.
