Reviewer's report

Title: Furuncular myiasis of the breast caused by the African Tumbu Fly (Cordylobia anthropophaga).

Version: 4 Date: 3 February 2004

Reviewer: Ian F Burgess

Reviewer's report:

General

I have reviewed the revised manuscript and am of the opinion that the authors have fully responded to all suggestions made for improvement of the manuscript. I think it is now a well structured and useful contribution on the subject.

There are one or two minor typographical corrections that could be made to the script in the reference section, i.e. differences of fonts etc, but these are for housekeeping purposes only.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
