Title: Laparoscopic Cholecystectomy in Situs Inversus Totalis
Version: 1 Date: 18 January 2005
Reviewer: Tarik Zafer Nursal

Reviewers report:

General

-------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

There are none

-------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

1. Throughout the text the term "cholecystitis" is used. When the history is taken into account, it seems that the patient had "acute cholecystitis" which is then cooled for further cholecystectomy. This should be changed.
2. p.3 1st sentence, situs inversus should be written in lower case characters.
3. p.3 1st paragraph, the syndrome should spell "Kartagener's syndrome".

-------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
