Reviewer’s report

Title: Acute scrotum as a complication of Thiersch operation for rectal prolapse in a child

Version: 1 Date: 18 September 2006

Reviewer: Steven Wexner

Reviewer’s report:

General
I am unsure as to who is the targeted readship for BMC Surgery. I found the article interesting as a case report, but am unsure as to whether or not BMC Surgery publishes case reports and if so whether your readership includes pediatric surgeons, who would probably be the only audience interested in this topic.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
None
-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
Needs some grammatical revision.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
Grammatical

What next?: Accept after discretionary revisions
