Reviewer's report

Title: Splenic peliosis with spontaneous splenic rupture - a report of 2 cases.

Version: 5 Date: 19 June 2006

Reviewer: Gianlorenzo Dionigi

Reviewer's report:

I enjoyed reviewing the paper "Splenic peliosis with spontaneous splenic rupture: a report of 2 cases" by Lashbrook, et al. The Authors describe unique cases of atraumatic splenic rupture in which splenic peliosis was diagnosed following splenectomy. I think that the paper describes an interesting case report with unique pathological figures. All the questions above were answered by the Authors. I think that the Editors should not minimize the potential interest such a report will generate. Therefore I would support publication for this investigation.
