Reviewer's report

Title: A multicenter prospective trial evaluating fetal bovine dermal graft (Xenform(R) Matrix) for pelvic reconstructive surgery

Version: 1 Date: 24 June 2010

Reviewer: Ranjiv Mathews

Reviewer's report:

This is a non randomised trial with the use of a xenograft for the management of urinary incontinence in women.

The success rates at 6 months were similar to the rates at one year.

There was an 88% success at one year in this group that had various repairs using the xenograft.

Although this is a good success rate, it is an initial experience and longer term data would be essential.

It would be good to see a section in the discussion comparing how this material compares to other currently available materials for pelvic floor reconstruction and compare this to the one year results of these other materials.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
