Reviewer's report

**Title:** Bilateral Ureteropelvic Rupture Following Blunt Injury: a case report

**Version:** 2 **Date:** 10 June 2011

**Reviewer:** Patrick Spirnak

**Reviewer's report:**

Although this is an interesting case report of an unusual complication of blunt abdominal trauma ie)bilat upj obstruction the manuscript provides nothing new or compelling to the current urologic trauma literature. An option to prompt reconstruction would be perc tube drainage (especially in the unstable pt.) which was never mentioned in the paper. Since this manuscript does not add any new information to add to the current gu trauma literature, I am unable to recommend it for publication.

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
