Reviewer’s report

Title: Pan-urethral stones arising from bladder Diverticulum and its management: case report

Version: 2 Date: 17 April 2012

Reviewer: Stanley Zaslau

Reviewer’s report:

This is a nicely written case report with nice visuals. I do have a few questions that must be answered prior to further consideration: I would consider these to be minor essential revisions.

1. Did the patient have preoperative urodynamic studies? if so, please provide the details. Did he have urodynamic evidence of bladder outlet obstruction?
2. The patient had an elevated PSA. Was any consideration given to prostate needle biopsy? If so, and one was performed, what were the results?

The abovementioned comments would be considered minor essential revisions.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
