Reviewer's report

Title: Pan-urethral stones arising from bladder Diverticulum and its management: case report

Version: 2 Date: 17 March 2012

Reviewer: Neena Agarwala

Reviewer's report:

Major Compulsory Revisions
The report seems to have a major discrepancy - Was the patient lost for 4 months or 4 years as it indicates two different time frames in different sections. Was there a retained catheter for 4 years or 4 months? It makes a big difference in the etiology of this condition.

Minor Essential Revisions
Grammatical English errors need correction throughout the paper. The role and description of the diverticulum is inadequate. It is important to describe the conditions in greater detail for the reader to better understand the condition.

Discretionary Revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
