Reviewer’s report

Title: Efficacy of Temsirolimus in Metastatic Chromophobe Renal Cell Carcinoma

Version: 1 Date: 30 July 2012

Reviewer: Philippe Spiess

Reviewer’s report:

1) The present study is not suitable for publication as several case reports have been published with similar findings. For that reason, it is unclear what is original and worth publishing from this work.

2) Even though conventional bone scan and CT are conventionally used to evaluate bone metastasis response, there are several available techniques which are further superior to evaluate in a more objective way the metastatic tumor response to the treatment including MRI, FDG-PET and/or F-Na PET imaging.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
