Reviewer's report

Title: Cysticlean(R) a highly PAC standardized content in the prevention of recurrent symptomatic postcoital urinary tract infections: an observational, prospective cohort study.

Version: 1 Date: 28 March 2013

Reviewer: costantino leonardo

Reviewer's report:

This is a prospective study in the use of Cysticlean for recurrent post coital UTI. Unfortunately the small number of the sample and the short follow-up doesn’ t support the conclusion of the author. The inclusion criteria of at least two UTI in the last two years seems not to be appropiate to define a recurrent symptomatic postcoital UTI. The antibiotic therapy is not mentioned before starting the therapy with Cysticlean.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
