Reviewer’s report

Title: Use of daptomycin in the treatment of vancomycin-resistant enterococcal urinary tract infections: a short case series

Version: 1 Date: 27 January 2013

Reviewer: James Malone Lee

Reviewer’s report:

I like this case report and believe it to be important. Enterococcus is a real swine and reports on its treatment are invaluable. Whilst this may not be an RCT, their expense and the time that it takes to complete them, mean that this sort of report is essential for development.

It is very well written and a most interesting read and I should be very keen for it to be published. The authors give all of the information that interested parties would wish to know and they present a balanced and reflective case

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
