Reviewer’s report

Title: New Grading System for Upper Urinary Tract Dilation Using Magnetic Resonance Urography in Patients with Neurogenic Bladder

Version: 2  Date: 14 April 2014

Reviewer: Enrico Finazzi Agro

Reviewer’s report:

This is an interesting paper about a new MRI classification of UUT dilatation. The relevance of the paper is related to the fact that MRI classification vary in comparison to US classification.

Minor comments:

The authors should separate the results paragraph from the discussion paragraph.

Could the authors comment about costs of MRI? Which patients really need an MRI instead of a simple renal US? In case only US would be done, what informations could be missing and what could be the clinical relevance of them? (the authors have already partially answered this question in the discussion).

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
