Reviewer's report

Title: Pain and satisfaction during rigid cystoscopic ureteral stent removal: A prospective, randomized, pilot study

Version: 3 Date: 20 April 2014

Reviewer: Seung Wook Lee

Reviewer's report:

minor essential Revisions

1. If authors intended to use midazolam or propofol as a moderate sedation method, these methods have common purposes. Please describe the details more about the study design why authors used two control groups: midazolam group and propofol group.

2. Moderate sedation is a key method for outpatient department procedure because it enables earlier safe discharge. Authors have to describe about the method how the moderate sedation was kept and also about any effort not to be kept in severe sedation.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
