Reviewer's report

Title: Uroflowmetry Nomogram in Iranian Children aged 7 to 14 years

Version: 3 Date: 13 December 2004

Reviewer: Andrew R. Willan

Reviewer's report:

General

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

The interpretation that the p-value is the probability that the slope is zero is inappropriate. The p-value in this context is the probability of observing a slope as least as large as you did if the true value of the slope is zero. Somewhere in the Results Section you need to state that the p-value refer to the test of the hypothesis that the slope is zero.

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes

Declaration of competing interests:
