Reviewer’s report

Title: Primary PEComa of the Bladder Treated with Primary Excision and Adjuvant Interferon-Alpha Immunotherapy: A Case Report

Version: 2  Date: 11 July 2006

Reviewer: Athanasios Papatsoris

Reviewer’s report:

General

-----------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

1) In the Pathology section the authors mention that strong and diffuse staining for HMB45, Melan-A and smooth muscle actin, while other markers were weakly stained. Please provide details regarding the grading of staining and the immunohistochemical controls.

2) References 2-8 in the text are written at the end of the sentence.

-----------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable
