Reviewer's report

Title: Epidemiology of complications of male circumcision in Ibadan, Nigeria

Version: 3 Date: 14 July 2006

Reviewer: Anthony Caldamone

Reviewer's report:

General
While I would disagree philosophically in what the authors refer to as a complication, I do realize that it is a subjective call and standardization of this is difficult. This particularly relates to the issue of calling residual redundant skin a complication. Therefore I would accept the article with the extensive changes that have been made.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
