Reviewer’s report

Title: Endovascular control of Haemorrhagic Urological Emergencies: An observational study

Version: 1 Date: 16 May 2006

Reviewer: Fred Luchette

Reviewer’s report:

General

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
The authors report their experience with 14 patients requiring angioembolization to control renal or bladder hemorrhage resulting from traumatic injury, iatrogenic cause, or spontaneous etiology. There was one failure. Unfortunately, this information has been previously described in the literature.

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

There are several typographical errors throughout the manuscript.

Figure 3. The CT image reveals a LEFT perinephric hematoma with contrast extravasation. The accompanying angiogram is labeled right kidney. This is confusing and should be corrected.

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Reject because too small an advance to publish

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Needs some language corrections before being published

Statistical review: No
