Reviewer's report

**Title:** Normal kidney size and its influencing factors - a prospective 64-slice MDCT study of 1,040 asymptomatic patients

**Version:** 1  **Date:** 22 July 2009

**Reviewer:** Salih Ozgocmen

**Reviewer's report:**

From the point of statistical review, I think the methods are appropriate however it is much more relevant if the Authors can give which methods they used in correlation analysis (coefficients related to Spearman or Pearson etc.)

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.

**Declaration of competing interests:**

No competing interest
