Version: 1 Date: 20 Jun 2001

Reviewer: Prof Hasan Mukhtar

Level of interest: A paper of considerable general medical or scientific interest

Advice on publication: Accept without revision

This is an interesting study showing interactive role of citrus peel use and black tea consumption in development of scc in the skin in Arizana, a population at high risk of skin scc. The approach is adequate, though limited in population size, and data obtained supports conclusions arrived. This study is recommended for publication in its present form.
