Reviewer's report

Title: Effectiveness of Photodynamic Therapy for Mammary and Extra-mammary Paget's Disease: A state of the science review

Version: 1 Date: 31 March 2011

Reviewer: Yolanda Gilaberte

Reviewer's report:

I found this systematic review very interesting because it summarizes and analyzes the available evidence about the usefulness of photodynamic therapy in Paget's Disease, an infrequent tumor for which a good treatment doesn't exist yet.

That is the reason because I found it suitable to be published in this journal. I found it very well written, clear and easy to read.

I only have a doubt related with the systematic review methodology. In my opinion, the methodology of the article is correct and the database search and the reports analysis is exhaustive. Nevertheless, I am not an expert in Evidence Based Medicine.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I've received speakers' honorary from Galderma.
