Reviewer's report

Title: Two sisters reveal autosomal recessive inheritance of epidermodysplasia verruciformis: a case report

Version: 6 Date: 30 June 2014

Reviewer: Bettina Burger

Reviewer's report:

The authors describe sisters with the clinical features of EV without finding a mutation in already known disease-causing genes. This indicates that more genes are involved in the development of EV, unknown to date.

Minor essential revision

Discussion, para1, line 15,16: "The parents of the patients were carriers..." -> The parents of the patients were presumed to be carriers...

Figure 1, Arrows on the histopathology image: Please add the arrows marking the inclusion bodies as they are not typical for EV.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
