Klaus Hoffmann (k.hoffmann@derma.de)

Version: 3 Date: 3 Apr 2002

Reviewer: Dr Timo Partonen

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Accept after discretionary revisions

Please find below my assessment of the revised paper (Re: Gambichler et al. Impact of UVA exposure on psychological parameters and circulating serotonin).

My original criticisms have been answered. The revised manuscript has improved a lot and is good in its present form. However, there are still the following minor points that need amendment.

- Page 2, section Results, line 4. It says "In comparison to T1, ..."; it should say "In comparison to T1 and T3, ...". Add the word "respectively" in the parentheses.
- Page 8, paragraph 2, lines 3 to 4 up. It says "at T1 versus T2 (r = 0.94; P = 0.005)"; it would be better to say "at T2 versus T1 (r = 0.94; P = 0.005) but not versus T3".
- Page 9, paragraph 2, lines 2 to 4. The discussion here will be more accurate, if these two sentences ("At all times ..." and "Both changes ...") would be presented in reverse order.
