Reviewer's report

**Title:** A new dimeticone pediculicide (NYDA(R) sensitive) shows high efficacy in a comparative bioassay

**Version:** 1  **Date:** 20 August 2009

**Reviewer:** Kosta Y. Mumcuoglu

**Reviewer's report:**

What is the idea of testing Mosquito R for its pediculicidal efficacy. Is there such a product as "Mosquito R/Laeuse shampoo/lice shampoo"? This is mentioned in the abstract but not in the table or M&M.

Why did the authors choose to compare the different products by taking the results after 1, 3 or 6 (sometimes 3 and 6) hrs after the initial exposure?

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.
