Reviewer's report

Title: Incidental findings on MRI scans of patients presenting with audiovestibular symptoms

Version: 2 Date: 15 April 2010

Reviewer: Jing Zou

Reviewer's report:

Most of the questions have been answered and the manuscript was revised accordingly. I recommend the author add the following description to the discussion:

So far MRI can not fully discover the pathological changes in the audiovestibular system, patients with negative results should be consulted in higher level hospital to get sophisticated inspection.

On page 10, line 16, please correct "n effective" to "an effective".

It can be accepted for publication in BMC after the minor revision.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
