Reviewer's report

Title: Primary Nasopharyngeal non-Hodgkin lymphomas: a retrospective review of 26 morrocan patients.

Version: 2 Date: 13 September 2009

Reviewer: M. Tezer Kutluk

Reviewer's report:

Thank you very much for giving me an opportunity to review the manuscript entitled “Primary nasopharyngeal non-Hodgkin lymphomas: a retrospective review of 26 morrocan patients”. Although retrospective the data presented in this article might be relevant because this is an interesting study of a special subgroup of patients with nasopharyngeal non-Hodgkin lymphomas. However with this form the article can be published only after the following revisions:

1. The article needs extensive linguistic correction before publication.
2. The histopathological data should be given according to WHO classification
3. The data of patients with diffuse large B cell lymphoma should be separately presented

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
