Reviewer's report

Title: Histopathological and ultrastructural analysis of vestibular endorgans obtained from patients with Meniere's disease

Version: 1 Date: 30 November 2008

Reviewer: Augusto Pietro Casani

Reviewer's report:

Major Compulsory Revisions

The topic of this study is interesting although not clinically relevant. I have major reservations as to the study design. There was poor correlation between the clinical data and the histopathological analysis of vestibular endorgans. The results demonstrated differential degrees of neur epithelial degeneration, with relative sparing of the utricular maculae: the saccular maculae function was not clinically examined using Vemps?

The authors should explicitly indicate a correlation between histopathological results and the clinical data from patients.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
