Reviewer's report

Title: Treatment adherence with the easypodTM growth hormone electronic auto-injector and patient acceptance: survey results from 824 children and their parents

Version: 2 Date: 4 November 2010

Reviewer: Rachel Annunziato

Reviewer's report:

The authors overall addressed the comments from the previous review thoroughly. I remain concerned though about three issues that cannot be or were not addressed:

1. Lack of details and psychometric properties of the adherence survey.

2. The arbitrary nature of in some cases reporting statistics and in other cases describing the findings as "descriptive".

3. And finally, the novelty issue brought up by my colleague during the review. Although the N is considerably higher and the international sample is laudable, the follow-up period was short-term.

I think that the article would be further improved if #1 & #2 could possibly be addressed.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
