Reviewer's report

Title: Giant cystic parathyroid adenoma presenting with parathyroid crisis after Vitamin D replacement

Version: 1 Date: 12 June 2012

Reviewer: George Sakorafas

Reviewer's report:

The authors should report the surgical approach used for the excision of the parathyroid lesion (i.e. through a neck incision? what was the role of thoracic surgeons?)

It is of interest to know if the patient suffered clinical manifestations of the bone hungry syndrome postoperatively.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

Competing interests: none declared
