Reviewer's report

Title: Unilateral cause of primary hyperaldosteronism is usual and adrenal vein sampling is mandatory in the diagnosis. Results from screening to histopathology in a Swedish population

Version: 3 Date: 31 March 2012

Reviewer: Yoshitaka Iwanaga

Reviewer's report:

Although this revised manuscript has been improved, the authors have not fully addressed all the comments. In particular, more discussion about AVS and histological findings should be necessary. Table 3 should be excluded since the authors think it to be extra and not included in the aim of the study.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
