Reviewer’s report

Title: Reference Intervals for Serum Osteocalcin Concentrations in Adult Men and Women from the Study of Health in Pomerania

Version: 1 Date: 27 January 2013

Reviewer: Helena Canhao

Reviewer’s report:

The paper is well structured and written.
I only have minor comments.
In table 3 the estimate for intercept should be removed.
The quadratic transformation for age does not make sense since authors have decided to use a median/quartile regression model.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
