Reviewer's report

**Title:** Central Precocious Puberty in a 3 year-old girl with Phenylketonuria: a rare association?

**Version:** 3  **Date:** 1 April 2014

**Reviewer:** Amaya A Belanger-Quintana

**Reviewer's report:**

Minor Essential Revisions:
The patient is classified as having a severe PKU phenotype, while Phe levels at diagnosis or the P39L mutation indicates a mild form. Phe tolerance is within the severe range in this patient, but no indication on trying a higher tolerance is made and therefore cannot trusted as the only way of classifying this patient. However, this difference does not affect the treatment followed or the other considerations made by the authors, which I believe to be correct.

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I have no competing interests in relation to the paper.
