Reviewer's report

Title: Testicular and inguinal lymph node metastases of medullary thyroid cancer: a case report and review of the literature.

Version: 2  Date: 7 September 2014

Reviewer: Carlos S Duque

Reviewer's report:

Line 42 will suggest “was referred for Urologic consultation” instead of Urologic surgery at once

Line 118 Is not my level of expertise as I am a Head and neck surgeon not and Urologic surgeon but are Inguinal noes treated different from neck nodes, I mean don’t they deserve a FNAbiopsy, yes I would think that the authors thought that regardless the patient will end up in surgery/ JUST A COMMENT

Maybe reduce /make shorter the discussion but again is quite illustrative

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I don’t have any competing interest to review this article at all!
