Reviewer's report

Title: Our clinical experiences and success rates of acromegaly treatment: The single center results of 62 patients

Version: 3 Date: 14 September 2014

Reviewer: Marek Bolanowski

Reviewer's report:

Major:
IGF should be presented as ULN, also (Tab. 1), since wide age range of the patients.
Menstrual irregularity should be 4/32 (Tab. 1), since regards women, only.
Statistics is not clear, in the methods section (line 133) the results are presented as average +/- mean, but in the Table 1 as SE +/- mean? No full GH results in Tab. 1.
I would suggest to delete from the title "our", it sounds not good.

Minor
Low quality of the figures.
What means "years" in Fig. 2 description, this is nor clear explained.
Unify the journal names in reference list (full or abbreviations).
Some "historical" positions should be replaced by important recent ones:

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
' I declare that I have no competing interests'
