Reviewer's report

**Title:** Tyrosine hydroxylase activity in the endocrine pancreas: changes induced by short-term dietary manipulation

**Authors:**
- Maria I Borelli (miborelli@yahoo.com.ar)
- Modesto Rubio (ininfa@ffyb.uba.ar)
- Maria E Garcia (marielisa_ar@yahoo.com.ar)
- Luis E Flores (fdplf@sinectis.com.ar)
- Dr Juan J Gagliardino (gagliardino@infovia.com.ar)

**Version:** 2  **Date:** 21 Jan 2003

**Reviewer:** Peter Thams

**Level of interest:** A paper of limited interest

**Advice on publication:** Reject

Although data from the previous published abstract now are included, the significance of increased tyrosine hydroxylase activity and decreased catecholamine content for diminished insulin release has not been explored. I can therefore not recommend publication at this stage.
