Version: 1 Date: 17 Jun 2003

Reviewer: Raiola Giuseppe

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Accept without revision

This paper substantially confirms the other observations done by different groups. The interest is that this cooperative study has been completed in underdeveloped countries where, today, the information on endocrine complications in these patients are low. The number of patients is significant. For these reasons the paper can be accepted.

P.S.
Please send me a little certificate that states I have done referee activity for your journal. This is required by my institution.
Please note that when I sent you my dates there has been a mistake: my surname is Raiola and the name is Giuseppe.
Best wishes
Dr. Giuseppe Raiola
