Reviewer's report

Title: Neurocognitive Function in children with Compensated Hypothyroidism: lack of short term effects on or off thyroxin

Version: 3  Date: 27 February 2006

Reviewer: Lynne Levitsky

Reviewer's report:

General
This revised ms is an initial effort to define the effects of short term thyroxine supplementation in children with compensated hypothyroidism. Because the age range of the children is large, and the time of initial diagnosis ranges from the neonatal period to older, one cannot be sure that a larger, more careful prospective study with controls will give the same outcome, but this study is a good place to begin.
