Reviewer's report

Title: Clinical features, predictive factors and outcome of hyperglycaemic emergencies in a developing country.

Version: 2 Date: 19 January 2009

Reviewer: Mark Savage

Reviewer's report:

This paper is much improved. There is still the occasional wayward apostrophe and bracket that will be edited out I am sure. The major points of both reviewers appear to have been addressed. The paper is now, I believe, more "important", as the messages are easier to elicit.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare I have no competing interests.
