Reviewer’s report

Title: Oral mucosal lesions in skin diseased patients attending a Dermatologic clinic: a cross-sectional study in Sudan

Version: 3 Date: 10 April 2011

Reviewer: Norberto Sugaya

Reviewer’s report:

Minor essential revisions:
1. Please, check the numbers on Table 2 - in several groups of OML the number of lesions in the left column is different of the total. Check the spelling of Lupus erithematosus.
2. As only 60 of the patients allowed biopsies or lab investigations for diagnosis conclusion, Table 2 should inform this aspect at least for those diseases that usually require such investigations.
3. Some OML diagnosis criteria should be discussed in the text as for distinguishing "atrophy of tongue papillae, erythema, erosion, lichenoid lesions, drug reaction, median rhomboid glossitis". Vitiligo as OML?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
