Reviewer’s report

Title: Perception of Toothache in Adults from Capitals and Inner Cities within Brazilian Geographic Regions

Version: 2 Date: 6 April 2013

Reviewer: Marc W Heft

Reviewer’s report:

RE; response to Major Compulsory Revisions comments by both me and the other reviewer:

Lack of information about the SES characteristics of the locales greatly lessen the value of the data report -- and the enthusiasm of the Reviewer. Are these data not available? The authors responded to the previous review with "This work will serve as basis for introduction and comparison of demographic and SES data in later study." Will this future study be a further analysis of the data from this sample or a new study with a new study sample?

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
