Reviewer's report

Title: Clinical, and histological characterization of oral pemphigus lesions in patients with skin diseases: a cross sectional study from Sudan

Version: 1 Date: 16 August 2013

Reviewer: DIMITRIOS IOANNIDES

Reviewer's report:

This is a very detailed and well designed study on the clinical and histological characterization of oral pemphigus lesions in patients with skin diseases. However the conclusions do not add any new information to the literature. What would be interesting to know a dermatologist who is dealing with pemphigus patients is the treatment modalities chosen and their efficacy and safety.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
