Reviewer's report

**Title:** Correction of malocclusion and oral rehabilitation in a case of amelogenesis imperfecta by insertion of dental implants followed by Le Fort I distraction osteogenesis of the edentulous atrophic maxilla

**Version:** 7  **Date:** 20 July 2014

**Reviewer:** Michele Callea

**Reviewer's report:**

Minor Essential Revisions

However, without stating the hystopathologic analysis of tooth and genetic counselling, the paper is merely descriptive;

at least as a statement on the 2 mentioned topics (Hystopathology and Genetics), the article is a bit weak

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

Conflict of interest are none
