Reviewer’s report

Title: Effect of photodynamic therapy (PDT) on Enterococcus faecalis biofilm in experimental primary and secondary endodontic infections

Version: 4 Date: 30 July 2014

Reviewer: Chiaki Kitamura

Reviewer’s report:

In the present manuscript, there is only one result and one figure. The methods were not appropriate and not well described, because the authors did not show any results about the infection ratio and disinfection ratio of each group.

Furthermore, the authors described that PDT is an effective supplement. However, the authors demonstrated that PDT alone is not effective.

From the present result and only one figure, the reviewer cannot understand this manuscript.

Authors should reconsider whether they did proper experiments or not, whether they prepared essential results to understand their hypothesis, and whether their writing of the manuscript is understandable, before the submission to the journal.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
