Title: Impact of Aesthetic Restorative Treatment on Anterior Teeth with Fluorosis among Residents of an Endemic Area in Brazil: Intervention Study

Version: 2 Date: 22 March 2014

Reviewer: Lyndie Foster Page

Reviewer's report:

Thank you for the revision of this paper and taking into account all the previous comments and suggestions.

Minor revisions

Results: Paragraph two, line 3. The authors are trying to state that no participants were lost (not included) due to items on the OHIP not being completed. This could be re-stated that there were no missing values in the OHIP questionnaire as would not want to exclude a participant due to missing values with such a small sample. You probably would then state what values were missing and how you handled this missing data.

While the authors have made some changes and taking into account the previous suggestion of not repeating the results as numbers and percentages in this section. There still appears to be data that we can see in the tables. This is also found in the discussion paragraph four. Paragraph 8 of the discussion needs rewording "During the interviews, the OHIP proved to be quick and easy application...."

Strengths section requires some clarification which are the strengths and which are the limitations. The second to last sentence of this section "the results showed the importance of restorative intervention in decrease the prevalence...." The use of decrease here needs to be changed to reducing or else the sentence requires rephrasing.

Conclusion: I do not think the first sentence of this paragraph is required.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
