Reviewer's report

Title: Longitudinal study of habits leading to malocclusion development in childhood

Version: 2 Date: 12 May 2014

Reviewer: Sudaduang Krisdapong

Reviewer's report:

Authors have responded to almost all my comments, except the sample size consideration. Answers for this comment are 'sample selection procedure', not 'sample size calculation'. Authors should have the knowledge on the required minimum size, which is crucial to a study aiming to testing associations. Please noted that this point also raised by the other 2 Reviewers and Associate Editor.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare that I have no competing interests.
