Reviewer's report

Title: Adult Dental Anxiety and its Relationship to Periodontal Status: The Assessment of 1203 Chinese Dental Patients

Version: 2 Date: 20 October 2014

Reviewer: Bálint Török

Reviewer's report:

Major Compulsory revisions
---

Minor compulsory revisions
When talking about "Do your teeth bleeding when ..." and "brush teeth bleeding" the text should be more sophisticated (bleeding on brushing for example)

Discretionary revisions
In the next study it would be preferable to use BPE for evaluation of the periodontal conditions. It is also cheap and a quick method to make groups like perio or non-perio patients.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
