Reviewer's report

Title: Statin using periodontitis patients have markedly fewer periodontal lesions - a cross-sectional study

Version: 2 Date: 7 January 2008

Reviewer: Bjorn Klinge

Reviewer's report:

This is a revised version of a previously refereed manuscript. In essence the authors have corrected and/or satisfactory commented my previous concerns. We may still have a different opinion regarding the significance of pocket depth per se to mirror inflammatory burden, but I have all respect for the different opinion expressed by the authors. So in summary: I congratulate the authors to another piece in the large jig-saw puzzle of possible relation CVD to periodontal inflammation.

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
