Reviewer's report

**Title:** Psychometric properties of Greek versions of the Dental Fear Survey (DFS) and the Modified Coral Dental Anxiety Scale (MDAS)

**Version:** 2  **Date:** 29 July 2008

**Reviewer:** Marita Rohr Inglehart

**Reviewer's report:**

Minor essential revisions:
I really like this revised version.
Just some minor suggestions:
- p. 4, second line from bottom: instead of "dental stimuli" - use "dental situations"
- p. 5, line 3: "range"

Under "Results":
- how about new paragraph before "internal consistencies" in second line from bottom?
- I would add to Table 1 the dentists' average anxiety ratings so the reader can see how they looked for all / male / female respondents.
- How about adding a Table with the retest information? both means as well as retest coefficients?

Overall: I would remove the information about the dentist ratings of cooperation completely from this manuscript. It is about dental fear and not about cooperation.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
