Title: Baropodometry on Women Suffering From Chronic Pelvic Pain - a cross-sectional study

Version: 1 Date: 12 September 2011

Reviewer: Gro Killi Haugstad

Reviewer’s report:

I think this study is a bit difficult to understand. How can You use this instrument to measure and evaluate the effect of pelvic pain? Clear this out!

Other studies have also found postural changes in CPP patients - but you just mention the Haugstad study. Montenegro et al and also others have mentioned it- take it in.

Is it other components than the pressure on the feet that is relevant for the postural changes?

In the other studies you refer to, are the posture changes the most relevant findings in the CPP patients?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
