Reviewer’s report

Title: Assessment of leukemia inhibitory factor and glycoprotein 130 expression in endometrium and uterine flushing: a possible diagnostic tool for impaired fertility

Version: 3 Date: 5 August 2011

Reviewer: Amolak Bansal

Reviewer’s report:

This results of this study are fine and interesting but the report needs to be rewritten by someone with a good standard of English and who can summarise and eliminate many of the superfluous details in the introduction and discussion. There are well over 20 spelling errors. I would also like to see better photographs of the gels (if possible). Without adherence to these changes the report is very difficult to understand and particularly in regard to the conclusions.

Level of interest: An article of importance in its field

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
